

## DETAILS ABOUT GREENLEAF'S FACE SHIELD COMPONENTS

VISOR SIZE	
<b>EXTRA COVERAGE</b>	14" wide X 9" tall, crystal clear, with anti-fogging properties. Maximum coverage wraps further around the head and well below the chin. Protects medical personnel against fluid spray entering from the side. Please note that wide coverage will reduce lateral air flow and may feel warmer if not working in an air conditioned environment.
<b>STANDARD</b>	11.75" wide X 8.5" tall crystal clear, with anti-fogging properties. This is the standard coverage size for the industry. While not adequate for some healthcare professionals, this size provides adequate protection in normal life situations. Provides better lateral air flow than the Extra Coverage shield size.
SIZE SETTING	
<b>M-XXL</b>	Fits medium to large adults (face/head size), and most older children.
<b>XXS - S</b>	Strap, foam and label are set lower on the visor to fit small children to small adults (face/head size).
FOAM MATERIAL	
<b>MEDICAL GRADE</b>	Latex-free material designed for comfort and easy clean up. This closed-cell foam has a smooth surface, which increases comfort and ease of cleaning. This type of foam is superior to the vast majority of face shields being sold today.
<b>POLYURETHANE</b>	Considered "typical" foam. It is an open-cell design, so it will not match the medical grade foam for comfort or ease of cleaning.
FOAM STYLE	
<b>PREMIUM</b>	12" long X 1.5" thick. Engineered to gently conform to the forehead and minimize the chance of fluid intrusion. Due to its thickness, the visor sits well off the face for people with glasses, loupes, or claustrophobia. This foam style is preferred by healthcare providers. Recommended for air conditioned environments since this design intentionally inhibits air flow. Comes in white or gray color.
<b>COOLVENT™</b>	10" long X 1.5" thick. Engineered for comfort in warmer environments or for people with more active lifestyles, this design minimizes contact surface area with the forehead plus allows vertical air flow. Like the Premium design, it sits well off the face for people with glasses or claustrophobia. Designed with input from food workers at Chick-fil-A and Petro's, this foam design works very well for factory workers. Comes in white or gray colors.
<b>ECONOMY</b>	9.5" long X 1" thick. The shield will sit closer to the face than Premium or CoolVent™. Color is based on market availability, but typically comes in white, gray, or black. Customized foam colors are available for large, customized orders.
FOAM COLOR	
<b>WHITE</b>	White is the choice of healthcare workers for its clean/sterile appearance.
<b>GRAY</b>	This is a charcoal gray color.
<b>VARIOUS</b>	For customized orders only. Must use Polyurethane foam in the Economy foam style.
HEAD STRAP	
<b>LINED VELCRO</b>	Velcro straps allow the user to set the perfect size for their head. Cotton lining creates a finished look. These straps are either white or black, depending on market availability.
<b>UN-LINED VELCRO</b>	Velcro straps allow the user to set the perfect size for their head. Velcro color is white or black, depending on market availability.
<b>ELASTIC</b>	This is a one-size-fits-all head strap. Colors are based on market availability, but typically come in white or black.
HEADER LABEL	
<b>LARGE VINYL</b>	Vinyl labels are completely washable and water resistant. Large labels go with the extra coverage face shields.
<b>STANDARD VINYL</b>	Vinyl labels are completely washable and water resistant. Standard-sized labels go with the standard coverage face shields.
<b>GLOSSY PAPER</b>	While these labels are somewhat resistant to moisture, users should be careful when cleaning the front of their face shield with water or cleaning fluids.
<b>CUSTOMIZED</b>	For large orders, labels can be customized with your own graphics and print colors. We can use existing graphics or design them for you. Various sizes and shapes available.
